Cybersecurity Safeguards

Cadette Cybersecurity Badge — Girls Build Bots

Presented by your robotics mentors

Attackers don’t hack computers

They hack people.

Social engineering. Urgency. Impersonation.

The defense: a calm, skeptical mind — plus a few strong technical habits.

Rule, stated out loud 📢

Every credential today is invented.

We will not log into anything during this session.

The rule is the lesson.

Authentication: how does a system know you're you? 🔑

Factor	Example
Something you **know**	a passphrase
Something you **have**	a code on your phone — **2FA**
Something you **are**	a fingerprint

Passphrase refresher: length beats cleverness. Three random words.

Two locks beat one 🔒 🔒

A stolen passphrase, alone, fails against 2FA.

And the grown-up tool: a **password manager** — one strong master passphrase, unique passwords everywhere else.

Deliverable: your written personal authentication plan.

Social Engineering Defense 🎭

Work the scenario deck. For each message, name the **manipulation lever**:

Lever	Sounds like
Urgency	“in the next 10 minutes!”
Authority	“this is the school office”
Emotion	“your friend is stranded”
Reward	“you’ve been selected”

The counter-move ✋

1. **Slow down.**
2. **Verify through a separate channel** — call the real number, ask the real friend in person
3. **Never act on pressure.**

One message in the deck is REAL 🎯

Because the skill is **discrimination**, not blanket paranoia.

Which team sorts the full deck correctly *and* names every lever?

Privacy Audit Workshop 🔍

From memory — **no logging in**:

- What accounts exist?
- What does each one **know** about you?
- **Who can see what?**
- What would you change?

Think of it as taking inventory of your own house keys.

Your top three 📋

Three concrete actions to complete at home **with a parent**:

- Tighten one setting
- Enable **2FA** somewhere
- Retire an unused account

Robot moment 

We protect team accounts and code with unique passphrases and 2FA.

And “someone urgently needs the team login” is a message you **verify** — never obey.

Defense Drill ⚡

Rapid fire. We read a scenario; you call the **lever** and the **counter-move**.

Closing, honestly: which lever would most likely have worked on you *before* today?

Self-awareness is the strongest safeguard in the room.

What you accomplished ✅

- Explained authentication factors and why 2FA defeats a stolen password
- Identified the manipulation lever in a social-engineering attempt
- Applied the verify-through-another-channel counter-move
- Completed a privacy audit and committed to three improvements

Level up 🚀

- Do your top-three audit actions **this week**, with a parent
- Teach the four levers to someone who'd fall for one
- You now see the levers — they don't work as well on someone who sees them

📣 Share Your Impact

Troop leaders & robotics teams — if you used this curriculum, please:

1. **Credit us** — the curriculum comes from **Girls Build Bots**
2. **Tag us** — **@girlsbuildbots** on Instagram
3. **Report your results** — email **girlsbuildbots@gmail.com** with how many girls took part, how many badges were earned, and how it went

This is how the program grows — and how the next troop and team get better materials.
